ALPR Camera System Installation of Automated License Plate Reader (ALPR) cameras at designated high-traffic perimeter intersections. This will enhance ESPD's existing mobile ALPR program. Integration with current PIPS platform is desired/essential.	HR Application in Eden Acquire an HR module to support Human Resources activity. The HR Department does not have a system to track and manage personnel records, skills, accomplishments, position control, training, evaluations and reporting. Excel spreadsheets are used to track longevity, benefits, step increase, FMLA, ACA, etc. The HR application is typically included in ERP systems, which allows coordination between payroll duties and HR.	Fire/Police Staff Scheduling Staff schedules are completed using Excel spreadsheets. This project would procure automated scheduling software. Integration with the payroll application would further streamline manual processes. The scheduling of fire personnel follows specific labor agreed practices which are very complex , yet the system mimics existing hiring practices and completely automates from leave usage to position filling.	Utility Billing - Paymentus Implement an e-billing and e-payment platform that offers a variety of payment types and channels, create efficient communications between City Staff and the community and facilitates the access to documents such as bill and payment history in an easy and simple one vendor solution.	Building Permitting System         This project would procure a COTS (commercial off the shelf) solution that would support developer deposits (currently a manual process), integrate document imaging, support electronic plan submission and review, automate required reporting (i.e. AQMD, SMIP, SCAG) and support workflow to track activity. In addition, mobile access for field inspectors and code enforcement officers is desired.         Additional enhancements for the public include the ability to view project status, request inspections and view inspections results, and the ability to search permit history by location. Integration with the finance system would eliminate the current process which requires duplication of effort to enter permit information into the Class point of sale system to post cash receipts.
